

**OHIO DIVISION OF WILDLIFE  
WILDLIFE DISTRICT ONE  
BEAVER TRAPPING INFORMATION/REGULATIONS**

Congratulations for being selected in the ODNR, Division of Wildlife's Beaver Trapping Lottery for **Deer Creek Wildlife Area**. Your permit allows you to beaver trap at Deer Creek Wildlife Area (see enclosed map) and will be valid for the statewide beaver trapping season which runs from December 26, 2013 through February 28, 2014. Please read this document carefully, as you will be required to adhere to all regulations. For more information, contact the Deer Creek Wildlife Area Supervisor located at 12552 Post Rd., Mt. Sterling, OH 43143 (740) 869-2365.

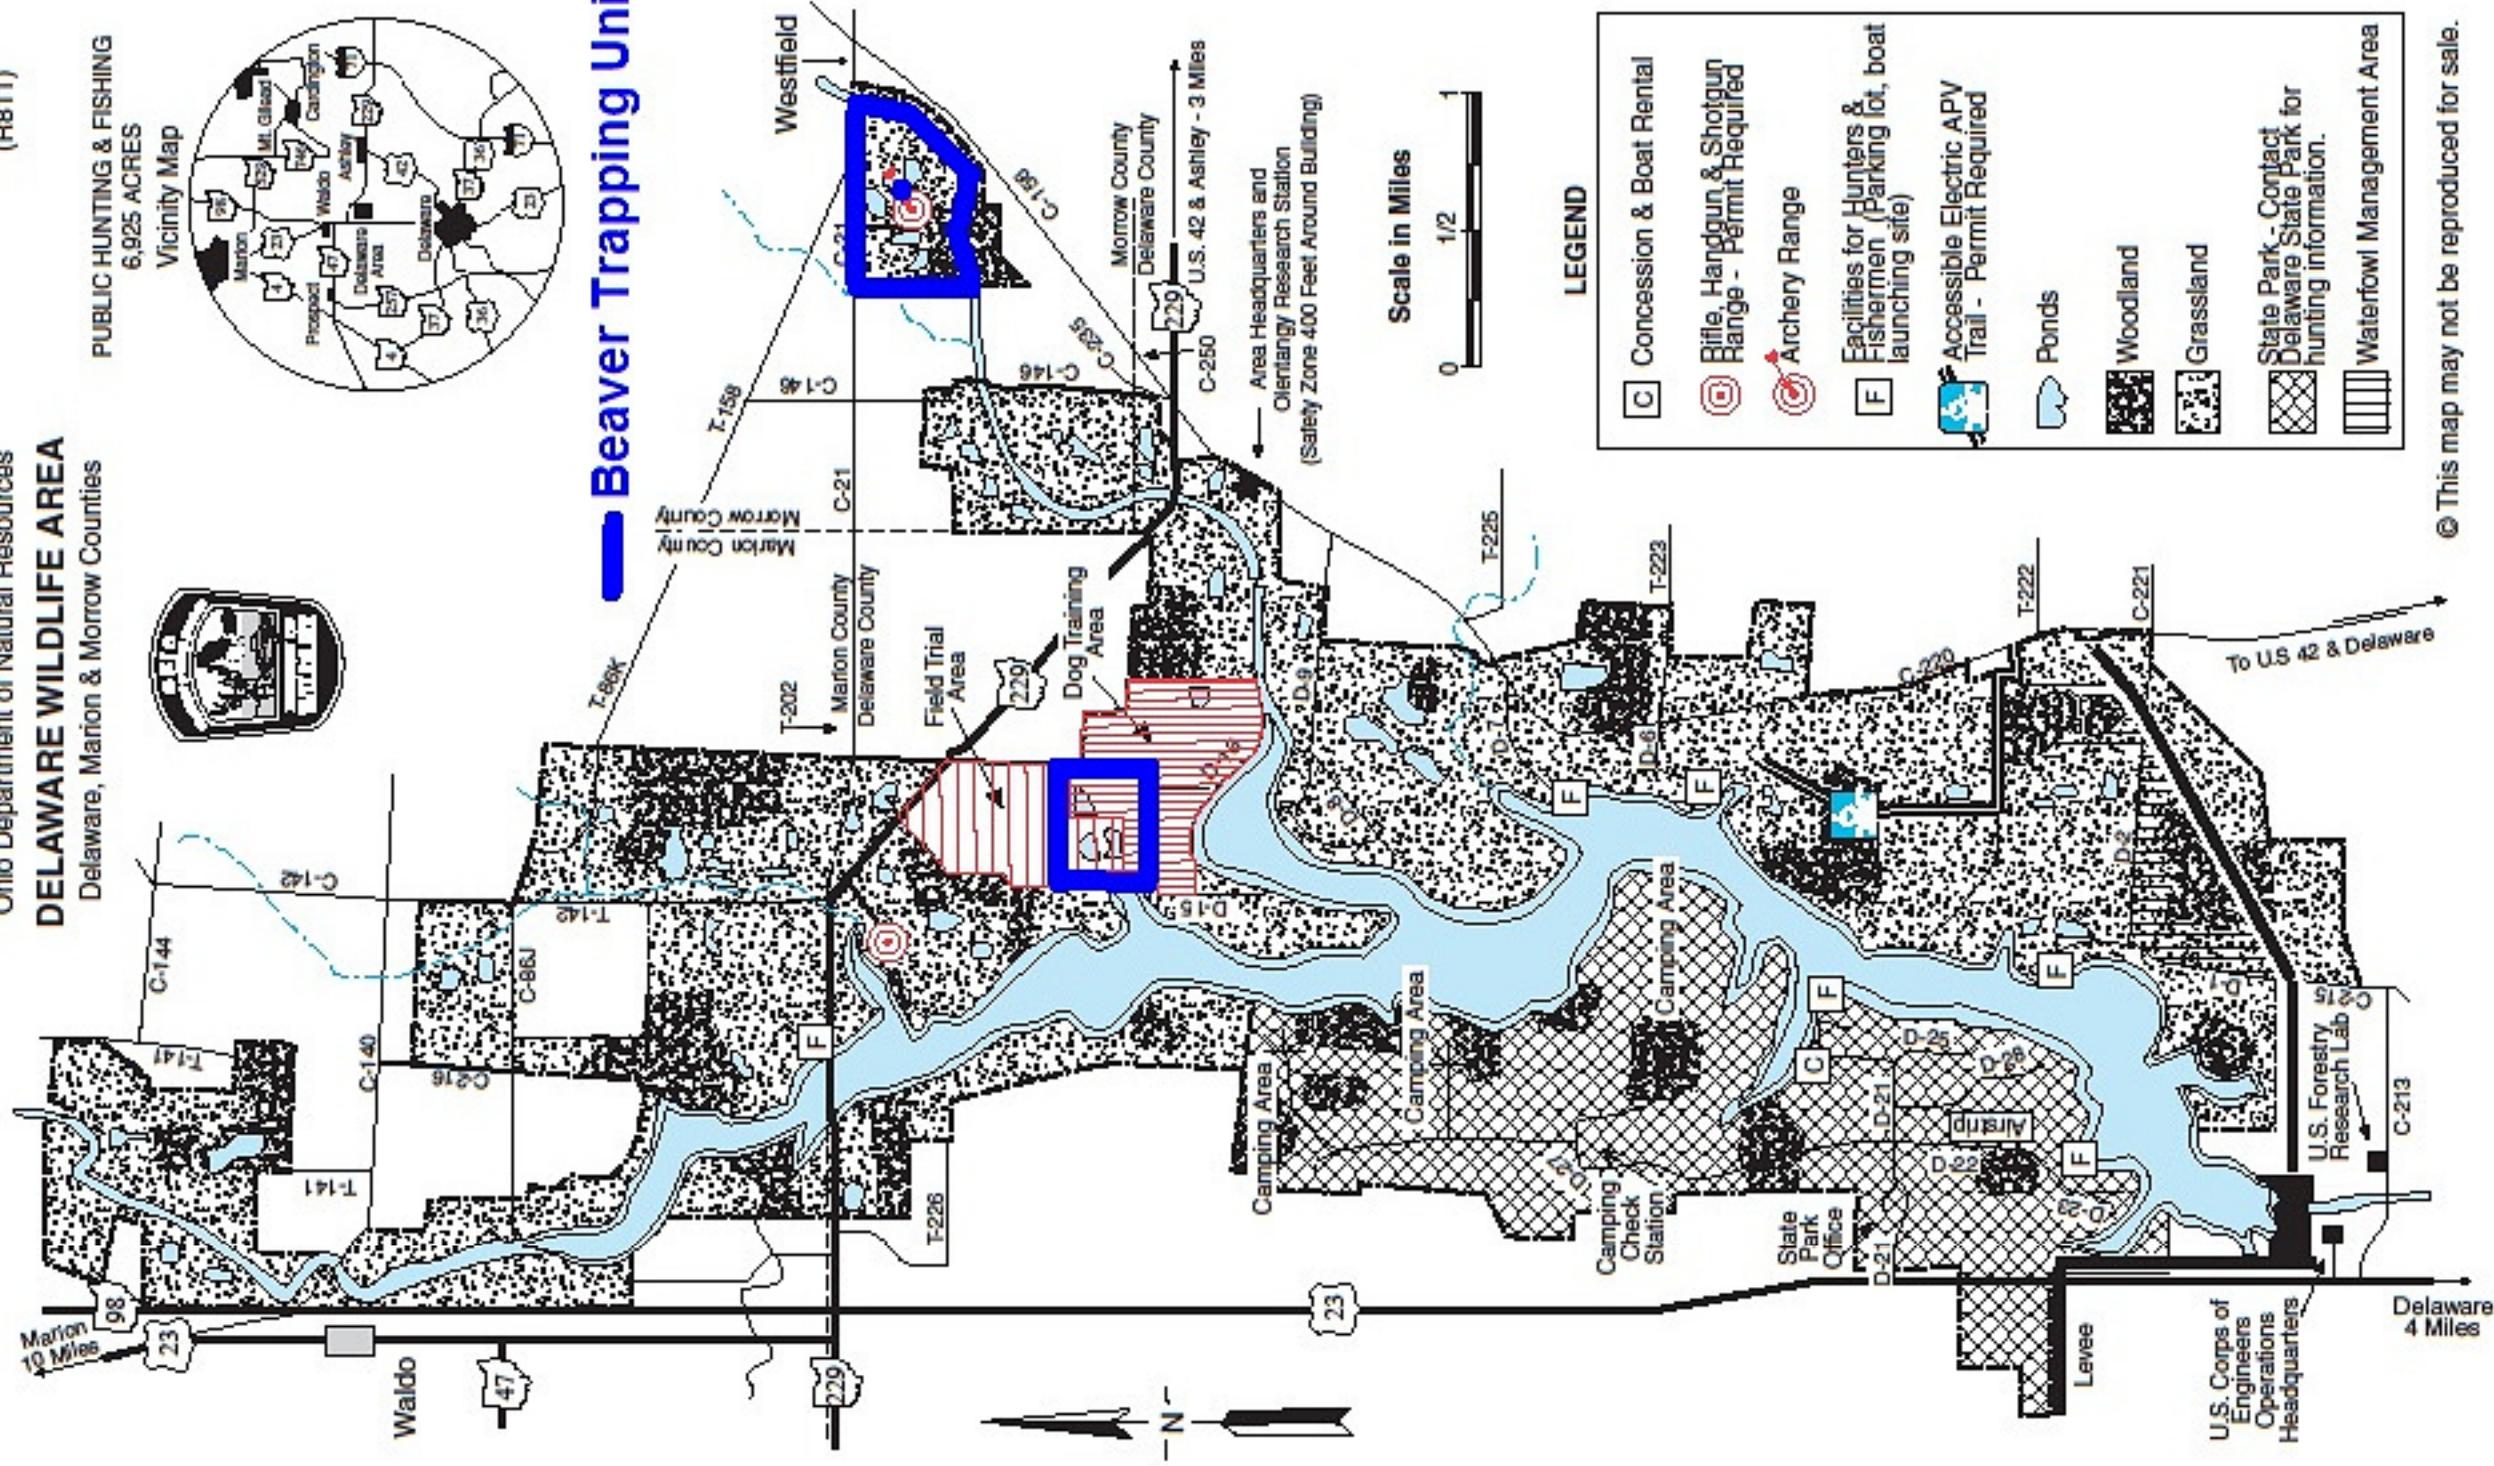

1. PLEASE NOTE: Beaver Trapping Permits have been issued to a limited number of individuals for Deer Creek Wildlife Area. It is highly likely that you will encounter other beaver trappers and/or their traps while at Deer Creek Wildlife Area. Common sense and courtesy must prevail in these instances.
2. Your Beaver Trapping Permit is valid for the entire Deer Creek Wildlife Area (see enclosed map). Beaver trapping is prohibited on lands and waters under the administration of the Deer Creek State Park and the U.S. Army Corps of Engineers. The Permittee is responsible for confirming Deer Creek Wildlife Area boundaries.
3. Your Beaver Trapping Permit authorizes you to trap BEAVERS ONLY. River otter trapping is **NOT** permitted at Deer Creek Wildlife Area. We ask that you follow the guidelines contained in Publication 407, "Techniques to Avoid Trapping River Otters," in order to minimize the chance of catching a river otter by mistake. If you do catch a river otter incidentally at Deer Creek Wildlife Area, you must follow the guidelines contained in Publication 88, "Ohio River Otter Trapping Regulations."
4. All other legal Furbearers may be harvested in accordance with established trapping seasons and regulations.
5. Beaver Trapping Permits are issued to a specific individual and are NOT transferable. If you are unable to use your permit, please contact the District Headquarters or Area Supervisor so an alternate can be drawn from the pool of candidates.
6. This Permit allows an assistant to accompany and assist the Permittee while beaver trapping at Deer Creek Wildlife Area. No Beaver Trapping Permit is required for the Permittee's assistant, although he/she must have a Fur Taker Permit. The assistant may not be changed once named. The assistant may set and run traps, but they may only do so while the Permittee is present.
7. If for some reason the Permittee decides not to trap beaver, neither may the Permittee's immediate family members UNLESS the family member is drawn as the alternate.
8. The Permittee must carry the following at all times while beaver trapping at Deer Creek Wildlife Area:
  - a. a signed Beaver Trapping Permit
  - b. a current Ohio Hunting License and
  - c. a current Ohio Fur Takers Permit.
9. Boats may be utilized but outboards and trolling motors are prohibited.
10. Trappers may visit Deer Creek Wildlife Area prior to the first day of the statewide beaver trapping season. Pre-season scouting is HIGHLY RECOMMENDED as beaver colonies are not evenly distributed over Deer Creek Wildlife Area. Even when encountered, beaver numbers are limited.
11. Access is not restricted on any portion of Deer Creek Wildlife Area. Be aware that the Wildlife Area is open for public hunting and trapping during legal hunting and trapping seasons. You may encounter hunters, other trappers and/or wildlife enthusiasts while scouting and beaver trapping.

# Ohio River Otter Trapping Regulations

Regulations are in effect for trapping river otters in Ohio, including season dates, zones, bag limits, and check-in requirements.

This pamphlet describes the river otter trapping regulations, and what successful river otter trappers must do after catching a river otter in Ohio.

• **SEASON DATES & BAG LIMITS:**

River otter trapping is permitted in certain areas of Ohio during the open river otter trapping season which is generally December 26 through the last day of February. Trappers should refer to the current Ohio Hunting Regulations booklet for season dates for river otter trapping.

• **ZONES AND BAG LIMITS:**

River otters may only be trapped in certain areas of Ohio, and in limited numbers.

- Zone A – Closed**
- Zone B – 1 Otter**
- Zone C – 3 Otters**

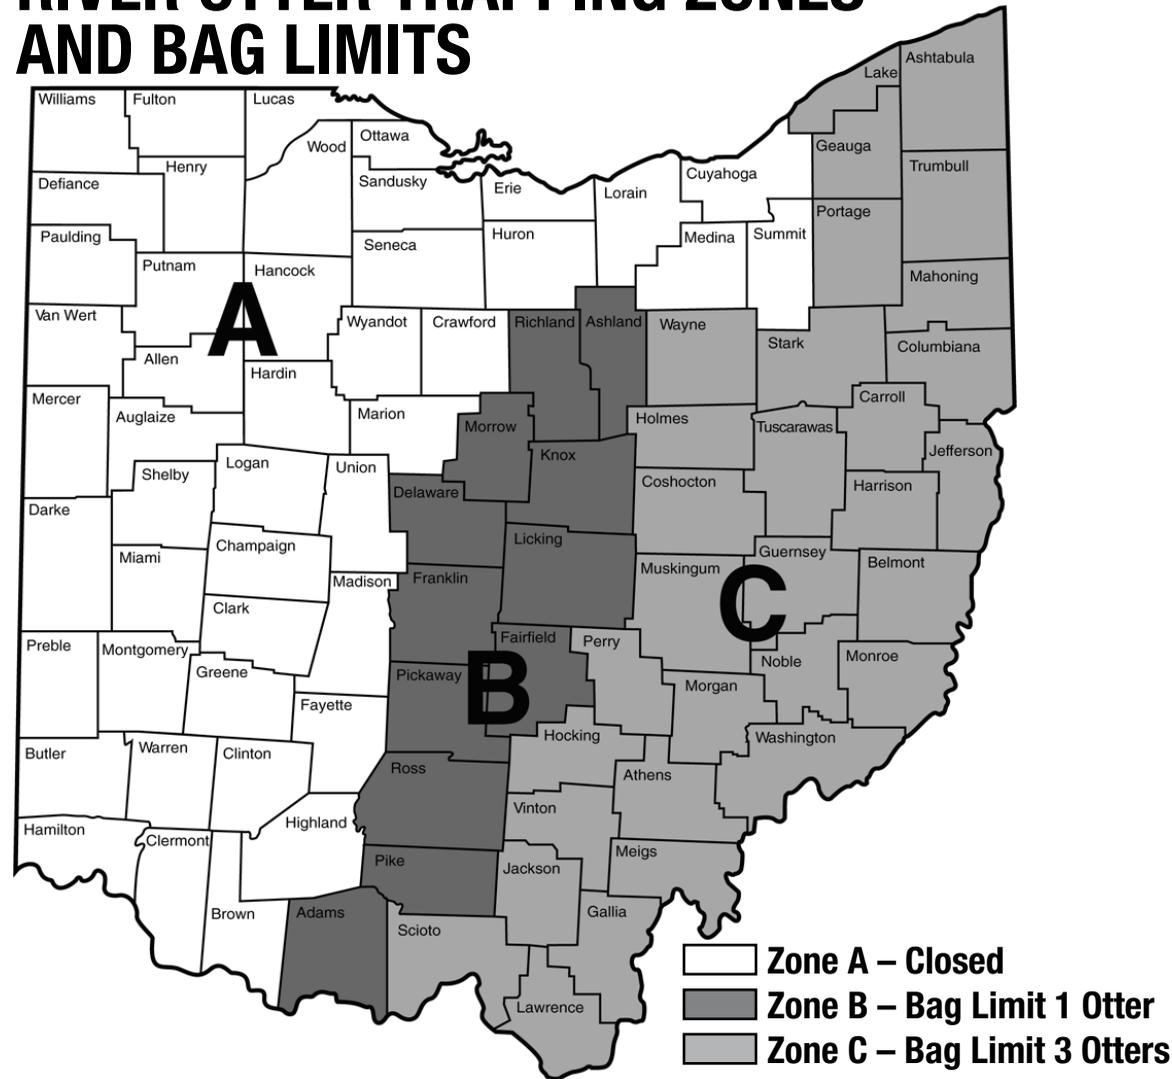

The total season bag limit is 3 river otters, of which no more than 1 river otter may be taken in Zone B.

• **REQUIRED PERMITS:**

Except for landowners and their children trapping on their own property, anyone trapping river otters in Ohio is required to have a valid hunting license and fur taker permit. No additional permits are required for trapping river otters on private lands or Mead Westvaco, B&N Coal and Turkey Run public hunting areas.

Limited river otter trapping opportunity is available on state public hunting areas, including state parks and forests, and is permitted only in areas where beaver populations require active management. A special beaver/river otter trapping permit from the Division of Wildlife is required in addition

# RIVER OTTER TRAPPING ZONES AND BAG LIMITS

to a hunting license and fur taker permit by anyone trapping these state public hunting areas, including state parks and forests, in Zone B or Zone C. Contact the Division of Wildlife district office in Akron, Athens, or Columbus for additional information.

Limited river otter trapping is permitted

within American Electric Power’s recreation area, known as ReCreation Land, Avondale Wildlife Area, and Conesville Coal Lands, with a special beaver/river otter trapping permit issued from the AEP Land Management office in McConnellsville, Ohio. Interested trappers should contact AEP **PRIOR** to October each year.

## CHECKING AND TAGGING REQUIREMENTS:

The pelt of each river otter must be brought to a designated location for pelt tagging within 72 hours of take. River otters may be taken to a designated check station from 8:00 a.m. to 9:00 a.m. (M, W, F), or by appointment. River otters may also be taken to any Division of Wildlife district office, (M-F, 8:00 a.m. to 5:00 p.m.). Carcass submission is no longer required.

**All State Offices will be closed on holidays. Call ahead for details**

Each trapper must personally present their own river otter, and may not present a river otter taken by another person. Trappers must also provide a copy of their Fur Taker Permit at the time of checking, and provide information about the date and location in which the river otter was trapped.

## ADDITIONAL INFORMATION:

Trappers who have reached their season bag limit are encouraged to implement river otter avoidance techniques while beaver trapping.

If you catch an otter in excess of your season bag limit or in a closed zone and it is still alive, carefully release it without causing injury to yourself or the river otter. If the river otter is dead, leave it in the trap and contact the wildlife officer assigned to that county or the District Office immediately to determine the course of action to follow.

is they can be used to make sets away from the otters' travelway, but will still be effective for beavers.

Of all the tools available to Ohio's trappers, the snare, when properly set for a beaver, is least likely to take an otter. For regularly snaring beavers, a loop diameter of 9 to 10 inches is recommended. With this 9- to 10-inch loop, most otters will pass through a snare without being captured.

## Alternate Beaver Sets

The beaver sets that show the greatest potential for otter captures are blind sets made in beaver travelways described earlier. Foothold traps, and especially bodygrip traps, set in these travelways where otters are present have a high potential for taking otters. Many times a set made nearby off the travelway can be very effective in taking beavers, yet avoid the vast majority of otters.

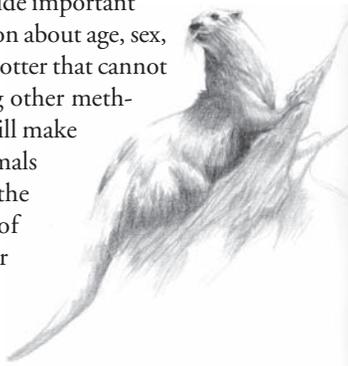

Beavers are highly susceptible to lure and visual attractors, but otters are rarely attracted by beaver sign or odors. Making a castor mound set near the travelway allows you to take the beavers while avoiding otters. Baited sets for beavers that employ peeled sticks and beaver food lures hold almost no attraction for otters.

## If You Catch An Otter

While Ohio trappers must make an effort to adjust traps and trap types and use sets that avoid catching otter, it is still possible for an accidental capture to occur. If you catch an otter, and it is alive, carefully release it without causing injury to yourself or the otter.

If the otter is dead, leave it in the trap and immediately contact the wildlife officer assigned to that county, or the district wildlife office to determine what course of action to follow.

Incidentally-trapped otters may be necropsied by the Division to provide important biological information about age, sex, and reproduction of otter that cannot be determined using other methods. The Division will make best use of these animals to help determine the health and status of Ohio's growing otter population.

# Techniques to Avoid Trapping River Otters

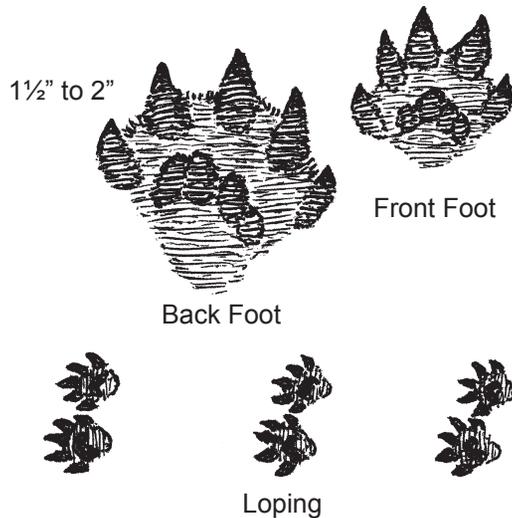

River otters have become more common in Ohio waters following their successful reintroduction from 1986 through 1993. Evidence exists to show that otters are reproducing and expanding their range throughout Ohio. While a limited number of river otters may now be taken in certain areas of the state, trappers who have reached their otter bag limit, or those trapping for beaver in areas closed to otter trapping may still need to employ otter avoidance techniques.

Since otters and beaver utilize the same habitat, there is an increasing potential that Ohio trappers may encounter otters as their numbers and range continue to expand. This pamphlet has been produced under a cooperative agreement between the Ohio State Trappers Association and the ODNR Division of Wildlife to help educate trappers on the best techniques for avoiding accidental otter catches, with a minimal impact on their beaver trapping success. Continuing education will help trappers become more effective in these efforts and improve the Division of Wildlife's ability to manage both beaver and otter populations in Ohio.

## Otter Sign

The first step to avoid trapping an otter is to learn to recognize when otters are present on your trapline. Otter tracks resemble those of a mink, but they are much larger, usually two to three inches across. Other signs of otters are toilet or latrine sites. These are typically found on high points along the banks of streams. The vegetation is usually flattened out, and the area may contain flat, runny piles of otter vomit. This vomit is greenish black in color and usually contains a large number of fish scales or crayfish parts. Otter droppings themselves are indistinct clumps of undigested fish bones, fish scales, and crayfish parts. These droppings may be flattened by the otter walking on them. Both vomit piles and otter droppings deteriorate quickly.

Another sign of otters are wallows, or 'scratch ups'. These occur along stream edges and consist of an area three to six feet in diameter where the grass or other vegetation has been raked or scratched into the center of the circle. Often, droppings or vomit will be found there. In snow, flattened trails can be observed where otters slide down the bank on their stomachs.

## Locations

Otters can be found almost anywhere. They usually follow streams and other small watercourses, but they will also travel across dry land. However, there are certain places they like to visit more than others.

Otters like to travel from one small watershed to the next looking for food. Any small ditch, creek, or stream that connects to another body of water is likely to be an otter travelway. This is especially true of small drainages that lead to or from a marsh, swamp, or pond where the otters like to hunt.

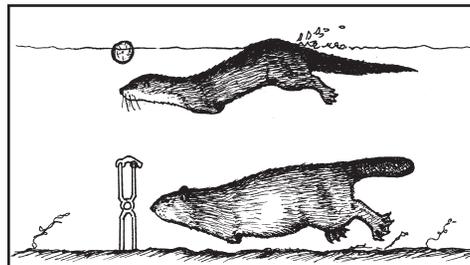

In a beaver flowage, the entrance and exit to a beaver pond are prone to otter travel. The inlet to a beaver pond has a high potential for otter capture as does the crossover on a beaver dam. While this may be a good place to catch a beaver, it also has a high potential for otter capture. This holds true for most crossovers along a beaver travelway, like crossovers near culverts or across manmade levees. Beavers often have well worn trails here, and it's likely that otters will follow the same path on their way through.

Another situation to avoid is an abandoned beaver lodge or bank den. Otters will check these regularly and often use them for temporary shelter when beavers have moved out. These abandoned dens and lodges are not particularly good beaver sets anyway.

## Traps

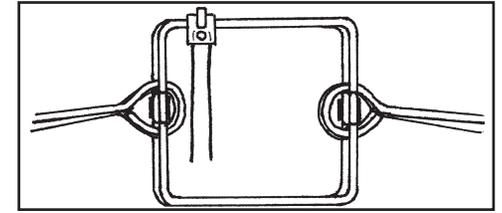

The large #330 bodygrip traps commonly used for beaver trapping have the highest potential for capturing an otter.

You can reduce the otter-capturing potential of a #330 by setting it deep under water. Choose locations that are 2½ to 3 feet deep, or deeper. Put your trap on the bottom and float a dive pole over it. Generally, when a beaver encounters the pole, it will dive all the way to the bottom and get in the trap. An otter, on the other hand, will tend to just duck under the pole and pass over top of the trap.

*Setting bodygrip traps deep under water may allow an otter to go over the top of the trap, while most beaver will dive to the bottom and be caught.*

Another way to reduce the otter capturing potential of a #330 is to move the trigger wires all the way to one side of the trap and point them straight down. This will give a slender otter the chance to get through the trap, while a beaver will probably fire the trap. You can also add a second trigger to a #330, placing one trigger on each side of the trap, with the wires pointing straight down. An otter will tend to hug one side of the trap and hit only one trigger. Whereas, a beaver will probably hit both triggers.

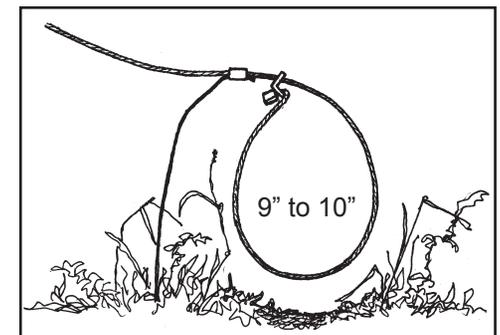

*Moving the trigger completely to one side of a bodygrip trap can leave room for an otter to get through.*

There are also some new #330 triggers available on which the tension can be adjusted with a bolt. Tightening the tension on the trigger and setting the trigger to one side can help preclude otter captures.

Still, the #330 in any configuration has a high potential for taking otters. If otter sign is present, you should avoid using #330s at key otter locations.

Foothold traps are less susceptible to catching otters, provided they are set deeply under water. However, foothold traps that are set shallow in trails that may be frequented by otters have a high potential for taking one of these animals. The main advantage of foothold traps

*A snare set with a loop of 9 to 10 inches will allow an otter to pass through, but will still catch beaver.*
